a
Along each molecule: closer to the donor end before the switch (yellow), to the other end after it
HG002 3q: chr11p-like block, then chr3q (3 molecules)
HG01258 20q: chr3q-like block, then chr20q (4 molecules)
HG002 9p: chr15q-like block, then chr9p (6 molecules)
HG002 17p: indel-rich chr11p-like block (window test fails) (6 molecules)
≥60
0
≤−60
closer to chr11p
closer to chr3q
closer to chr20q
closer to chr15q
closer to chr9p
closer to chr17p
contrast: divergence to the other end minus divergence to the donor end
(differences per 1,000 aligned letters; ±60 = capped, or aligns to one end only)

100
position along the molecule, from the telomere (kb)
b
Molecule sides outside the 17p claims: 262 of 273 closer to the end they were assigned to
no alignment to the other end
above the line: closer to the assigned end
below: closer to the other end
before the switch (assigned: donor end)
after the switch (assigned: other end)
